

TEMPERATURE RELIEF VALVE (TRV)

TEMPERATURE MANAGEMENT

If you're looking for a non-electric method of thermal management, then LUMINOR's new TRV is the solution. This relief valve allows for a small amount of water to be physically drained (dumped) from the UV unit to allow for cooling of the water. This is a fully automatic process that dumps water when the water inside the UV reactor reaches a preset temperature. This valve can be used in applications of extended "no flow" conditions, or when the temperature of the treated water is of a critical nature. The system comes complete with 10' of drain line.

| Model # | Sizing |
|---------|---|
| 130031 | 1/2" FNPT valve, fits LBX-03, LBHX-05 series |
| 130032 | 3/4" FNPT valve, fits LBX-06, LBX-10, LBHX-10 series |
| 130033 | 1" FNPT valve, fits LBX-15, LBX-20, LBHX-15, LBHX-20 series |
| 130034 | 1 1/2" FNPT valve, fits LBHX-40 series |
